ABSTRACT

The project **'MEDICAL SOLUTIONS'** is an initiative to help pharmacists have their business under one common entity. The product aims to have all the features operational in a drug store(or any general store of that kind) under one roof so that any end user is able to simplify his business needs and at the same time keep a record for his/her frequented customers.

At the same moment of time, the pharmacist can add customers to his database and provide them with user ID's and auto-generated passwords through which the customers of that particular pharmacist can avail their specified services.

None.

Chapter 2

Overview

MEDICAL SOLUTIONS is a web application which provides online medical services to everyone at their doorstep. The System consists of two parts-Admin login and Customer login.

When the admin logs in, he/she is redirected to the admin window wherein are various aspects of a pharmaceutical shop. The pharmacist (admin) can add different vendors, add items to his stock, and generate bills for his /her customers based on the customer user-id.

When the customer logs in, he/she would be redirected to a different window wherein are the various functionalities for a customer? The customer would be able to view the bills, the purchased medicines, nearby chemist shops, etc.
